

Kitchigami Family Campground Testimonial

To Whom It May Concern:

I'm the owner of Kitchigami Family Campground located about six kilometres south of Goderich, Ontario. I contacted MTS Environmental hoping they could solve my septic odour problems within the campground.

MTS Environmental proposed a shock and treatment program on April 29, 2005 for our entire septic system including holding tanks, septic lines and dual septic weeping beds. The results have been amazing and the odours have been virtually eliminated. Within four weeks, Bio-Desolve thoroughly flushed out my septic lines and liquefied my holding tanks. The liquefaction allows my septic beds to work evenly and efficiently as they were designed to do.

The odour problems within my campground are 70-80% improved since inception of Bio-Desolve. I also am very pleased with the vastly improved state of my whole septic system with the use of this product. I recommend using Bio-Desolve if you are experiencing these problems at your campground. Feel free to contact me with your questions or concerns at 519.524.6494, as I am still using Bio-Desolve to this day.
