

## Bio-Desolve Wastewater Treatment in Septic Systems:

- Reduces or eliminates the bio mat
- Reduces organic solids
- Significantly reduces odours and harmful gases
- Cleans the entire system – from pipes to tank to drain fields – meaning minimal maintenance
- Increases volume retention and storage capabilities
- Stabilizes contaminants and nutrients resulting in a healthier environment for microbes & bacteria to function properly

*Fats, oils, grease and sludge can be pushed through a septic tank into the drain field tiles creating a bio mat. The entire system can back up and fail. Bio-Desolve works in this area by reducing or eliminating the bio mat.*
