

Pest-Deter

A concentrated garlic juice in a natural carrier to repel mosquitoes, lower other insect presence and encourage the growth of natural soil micro-organisms

- Reduces insect presence
- Absorbs and neutralizes toxic compounds where applied
- Feeds beneficial micro-nutrients in the soil where applied
- Increases availability of fertilizer nutrients

Our Natural Pest Control can be used on all lawns, gardens, fruit trees and flower beds without damage to plants.

Slight staining may occur, so avoid application to porous surfaces such as concrete, decks and lawn furniture.

Garlic odour will be present when applied and will not be noticeable to humans within 1 hour. It will repel insects for up to 4 weeks, at which time it can be reapplied. Very heavy rains may reduce the period of effectiveness.

Notes:

- Do not apply to plants needing pollination near bloom time
- Do not contaminate irrigation or drinking water supplies
